

Keynote by Nicole Van Nes

Title: Shaping Our Future Mobility

What will the mobility system of tomorrow look like? Professor van Nes will present four thought-provoking scenarios for the future of our mobility — each with its own opportunities and challenges. Which future would you choose? And what will it take to steer us in that direction? The future isn't something that simply happens to us — it's something we create. Through research, innovation, and policy, we all play a part in shaping it.

In her presentation Prof. van Nes will zoom in on one of the most transformative forces in mobility: automation. Automated mobility promises to enhance road safety, sustainability and inclusivity of our transport system — but it also introduces new risks. Professor van Nes will share her perspective on how we can navigate this transition, address human factors challenges, and ensure a safe and seamless interaction between human and technology.
